

### Remote Car Racing Competition

<b>Topic :</b>	Remote car racing competition in collaboration with Mercedes Benz and MTV - "Date with Speed"
<b>Date of event :</b>	August 30, 2011
<b>Aim of the Event</b>	<p>What this society needs is a balance of education and fun. Although the need for an education is clearly stressed in today's society, people have inadvertently forgotten that play is also just as important. Just as education is a solid foundation for what a person becomes, so is knowing how to have a good time. Character is primarily defined with two things, education and personality. If one doesn't have a cheerful personality, developed by activities of fun, then their potential in character is drastically reduced.</p> <p>Thus it can be said that the value of having fun is just as significant as the importance of a well-rounded education.</p> <p>Hence here we were....with our cars, ready to zoom and vroom!</p>
<b>Description of the event</b>	<p>Date with speed was a remote car racing competition where there was a track for racing cars. The game featured very simple controls, with players using only the button on the joystick to make their car accelerate and letting it go in order to slow it down. The skill in playing the game was all about determining when to slow down around corners, so that the player's car doesn't fly off the track and when to use limited turbo boosts during the race.</p> <p>The game had a single player mode in which player's race around a</p>

track to try to accumulate a score that matches or exceeds a goal score.

And the winners were:

Name of winner	RANK	TIMINGS(in sec)
SAHIL KUMAR	1	23
TARUN GUPTA	1	23
VIKAS RAJ	2	24
MOHIT	3	26
JAI BHARDWAJ	3	26

Remote controlled cars were enjoyed not only by students but even by faculty as it was a stress relieving and diversion exercise. The activity was energizing for students and they enjoyed a lot.
