"Technical Interview Session"

Topic :	Technical Interview Session for the students of MCA IV Semester
Date of event :	January 23 , 2012
Aim of the Event	It is said that practice makes a man or a woman perfect. Sometimes, we know an answer to a question but are not able to answer to the best of our abilities when asked because we find it difficult to recall at that point of time. The aim of conducting technical interviews was to help students in recalling, correlating and answering questions put to the best of their abilities.
Description of the event	<p>Students were interviewed individually. Questions were put up to the students to analyze their technical understanding and knowledge in C & C++ programming languages.</p> <p>Students were asked questions that are important from interview point of view, in order to prepare them for later scenarios. Topics covered were:</p> <ul style="list-style-type: none">• Structures & Unions• Pointers & Pointer arithmetic• Functions• Early & late binding

- Virtual functions
- Inline functions
- Friend classes & functions
- Data Hiding
- Inheritance
- Operator overloading
- File handling
- Generic classes.

Students were allowed to demonstrate the concepts asked with the help of examples. Towards the end of the session, it was clear to the interviewer and interviewee as to what the weak areas were for the students. We wholeheartedly hope that students would take time out and work harder on the areas in which they were pointed at for their improvement and growth.
